

Infor Fashion for apparel manufacturing

Synchronize demand and supply throughout your enterprise with Infor Fashion.

A cut above the rest

From tailored suits to t-shirts, from under garments to outer wear, from work wear to sports uniforms, whether it's men's, women's, and children's clothing, bridge fashions, haute couture, or something in between, apparel is about style, color, size, and fit. It is also about raw materials through to finished goods and the entire value chain in between.

Simplify your operations and your supply chain

Infor® Fashion is designed to support single-company, single-site organizations to those with multiple companies and/or multiple sites. The Infor Fashion suite is localized for 40 countries, supports over 20 languages, meets the currency and country-specific requirements of a wide range of countries, and handles time zones.

Infor Fashion supports all manufacturing and supply chain models, to ensure cost-effective processes—from fleece through to finished goods. Our fashion-specific solution synchronizes demand and supply throughout your entire manufacturing process.

Get apparel-specific functionality

Whatever raw materials you source and categories of garments you manufacture, Infor Fashion can be configured to meet your specific requirements. And it is flexible, so that it can scale with your business as you grow. The solution is ideal for handling a wide product variety, high order volumes, variable order quantities, and short customer-order lead times. It incorporates:

- A user-definable matrix that supports customer, purchase, manufacturing, and distribution orders.
 The matrix is made up of definable attributes or variants such as style, color, waist size, in-seam length and quality.
- Support for demand planning and forecasting, including forecast consumption at the style or style/color level.
- Flexible and automatic generation of SKUs from style or style/color attributes, for example, to speed up creation of the underlying product data.
- An integrated planning workbench, to allow you to simulate plans at an aggregated style or style/color level, and help you make decisions on resource capacity, where to produce, and when to produce.

Improve delivery performance

Apparel manufacturing is characterized by stringent customer demands and complex global supply chain logistics. Moving more styles and greater volumes through the value chain with greater speed to fulfill demand and turn inventory into cash faster has always been challenging. There is pressure on manufacturers from retail to comply with delivery accuracy, quality and quantity requirements while adhering to socially responsible manufacturing practices. Infor Fashion encompasses all aspects of supply chain management, allowing you to:

- Perform tactical and operational planning across the supply chain.
- Link fabric orders to manufacturing and customer orders.
- Handle warehouse and inventory management.
- Exchange data with customers and suppliers via EDI or XML messages.
- Analyze costs and margins and get notification of exception conditions with operational business intelligence.
